Dear Mr. Wright

I urge the BPA to distribute power with the goal of promoting a NW future for wild Salmon. Salmon are the basis for a healthy ecosystem in our area. This ecosystem is the backbone of life. Air, water, vegetation, and the animals all depend on the salmon.

Much of the BPA's actions have had profound negative effects on the Salmon. Conditions can be improved if only gradually so that we will all stay more safely balanced on the Salmons back. However until the wild Salmon run strong again we live in a fragile world more susceptible to the environmental hazards both natural and caused by humans.

Please also include an increased commitment to developing clean renewable energy in your energy distribution plan.

Thank you,

Lesley S Kempself
