Subject: Comment on document ISRP 2007-9

This comment is for proposal 200752400 by Smith-Root

This is to communicate to you that we fully support this proposal as the technology can give another option to control sea lion/seal predation and information gained in the test could be extremely valuable in developing other applications as well. For example this could be used to enhance our ability to develop improved selective harvest to protect wild and native fish and harvest hatchery fish down the road. Thank you. Jack Kaeding, Fish First.
