Subject: Fish Passage Center

Dear People,

I am writing to encourage you to maintain the good, independent science that the Fish Passage Center has provided for the last 20 years. I would also recommend that these functions be maintained in an independent environment. Housing them with or having them in any way subservient to the BPA would be a dreadful conflict of interest that bodes ill for either entity.

In our headlong rush to decimate what was here on this continent when white people arrived, we have lost much. The truth is there is much still that continues to be lost. I would like my children and grandchildren to not live in a barren wasteland, which it seems may be the result of the greedy, misguided policies of the current administration.

Please think of the future for all of us, not just the moneyed interests that seem to have an inordinate influence at present.

Respectfully,

John Nettleton
USMC 1967-1971 (Vietnam 1969-70)
Child care worker (1976-present)
