## Text descriptions for each question

QuestionID	QuestionText
I.A.1.1	gives orientation to the subbasin
I.A.1.2	describes the subbasin's macro-environment and water resources
I.A.1.3	describes anthropogenic disturbances to the aquatic and terrestrial environment
I.A.1.4	lists native and non-native fish and wildlife species
I.A.1.5	lists plants designated as threatened, endangered, or have special cultural, spiritual or ecological importance
I.A.2.1	describes how this subbasin fits within its regional context
I.A.2.2	describes this subbasin's relationship to Endangered Species Act planning units
I.A.2.3	summarizes external environmental conditions that may effect fish and wildlife
I.A.2.4	describes macroclimate and human occupation and use trends that may affect hydrological or ecological processes over the long-term
I.A Summary	provides the geographical, demographical, and environmental context for fish and wildlife resources
I.B.1	identifies a series of focal species that will be used to characterize the status of fish and wildlife species
I.B.2	identifies and characterizes focal species populations
I.B.3	describes the current and historic status of each focal species population and summarizes available population data
I.B.4	describes the population's life history
I.B.5	characterizes the genetic diversity of the population, especially regarding possible effects of artificial production
I.B.6	describes historic and current harvest
I.B Summary	describes the current status of fish and wildlife focal species
I.C.1.1	describes the current condition of the environment
I.C.1.2	classifies 6th field HUCs according to the degree to which each area has been modified and the potential for restoration
I.C.2.1	identifies factors outside the subbasin that significantly effect each focal species, with particular attention to bottlenecks
I.C.2.2	establishes assumptions that can be used to calculate the effects of external conditions on the productivity and sustainability of fish and wildlife
I.C.3	identifies for each life stage the environmental factors that are particularly important for the species' survival
I.C Summary	describes the effect of the environment on fish and wildlife populations
I.D.1	identifies important inter-species relationships or interactions
I.D.2	identifies key ecological functions for species and assesses the current status of ecological processes and functions
I.E.1	limiting factors: describes historic factors or conditions leading to the decline of each focal species; and current key factors or conditions inhibiting populations and ecological process and functions relative to their potential
I.E.2	key findings: synthesizes 1) species status, 2) subbasin environment status, 3) biological performance of focal species, 4) ecosystem health, 5) potential conflicts and compatibilities between species and ecological processes, 6) limiting factors
I.E.3	describes the key assumptions (including uncertainties) that have been made in the "Key Findings" above, and documents the data sources and/or analytical tools relied upon
I Summary	synthesizes information regarding ecosystem health and functioning
II.A.1	identifies areas with protections through stream buffers, municipal or county ordinances, conservation designations, or water resources protection
II.A.2	assesses adequacy of protections for fish, wildlife, and ecosystem resources
II.B.1	identifies and reviews applicable local, state, tribal, and/or federal fish and/or wildlife management plans and water resource management plans that affect fish and wildlife
II.B.2	assesses the extent to which existing plans are consistent with the subbasin assessment and their adequacy in protecting and restoring fish, wildlife, and ecosystem resources
II.C.1	identifies ongoing or planned public and private management programs or initiatives that have a significant effect on fish, wildlife, water resources, riparian areas, and/or upland areas
II.C.2	describes each management program's activities, lead entities, how it was authorized, funding sources, relationship to other activities

II.C.3	identifies each management program's limiting factors or ecological processes the program is designed to address
II.C.4	summarize each management program's accomplishments/failures
II.C.5	relates the assessment to existing activities; identifies the gaps between actions that have already been taken or are underway and additional actions that are needed to address the limiting factors and meet recovery and other goals
II Summary	summary of inventory
III.A	the Vision section of the mgmt plan 1) describes the desired future condition; 2) describes a vision to develop biological objectives and strategies to change conditions; 3) incorporates the conditions, values and priorities consistent with F&W Program
III.B	the Biological Objectives section of the mgmt plan describes physical and biological changes needed to achieve the vision
III.B.1	biological objectives are consistent with basin-level visions, objectives, and strategies adopted in the program
III.B.2	biological objectives are based on the subbasin assessment
III.B.3	biological objectives are empirically measurable and based on an explicit scientific rationale
III.B.4	identifies short and long-term biological objectives
III.B.5	biological objectives are complementary to programs of tribal, state and federal land or water quality management agencies in the subbasin
III.B.6	Clean Water Act: the mgmt plan describes how the objectives and strategies are reflective of and integrated with the water quality management plan and Total Maximum Daily Load schedule within that particular state
III.B.7	ESA: the mgmt plan describes how objectives are reflective of and integrated with the ESA-based goals for listed species
III.B.8	where there are disagreements among co-managers that translate into differing biological opinions, those differences and the alternative biological objectives are fully presented
III.C.1	internal consistency: the Strategies section explains how strategies relate to biological objectives, vision and assessment
III.C.2	strategies are consistent with F&W Program
III.C.3	explains how and why some strategies were selected over alternatives
III.C.4	describes a proposed sequence and prioritization of strategies
III.C.5	describes additional steps required to compile more complete or detailed assessment
III.C.6	Clean Water Act: describes how the strategies are reflective of and integrated with the water quality management plan and Total Maximum Daily Load schedule within that particular state
III.C.7	describes how strategies are reflective of and integrated with the ESA-based goals for listed species
III.D.1	Research: RME section describes a research agenda with specific conditions and situations identified in the subbasin that will require specific research studies to help resolve management uncertainties
III.D.2	Monitoring objectives: identifies what kind of information needs to be collected in order to determine if the plan's vision and objectives are being met
III.D.3	Monitoring indicators: identifies measurable indicators of physical, chemical, biological, or socioeconomic conditions that may act as environmental signposts by which progress towards achieving the stated vision can be evaluated
III.D.4	Data archive: describes an infrastructure to archive relevant data and meta data generated through monitoring efforts
III.D.5	Coordination/implementation: describes who will collect the information and data collection methods; whether collection is done by a subbasin, provincial, state, or a regional entity, or a combination of entities
III.D.6	RME logic path: gives a scientifically supportable procedure for refining the biological objectives as new information becomes available about how fish, wildlife, and the environment interact, and in relationship to how the plans are implemented over time
III Summary	Management plan summary
CouncilQuestion	General Council question: plan is consistent with the F&W Program and its scientific foundation
